Torque

The sets of panther head torque model with “droplets”. Resembling fresco of centurion Marcus Caelius from Bonn Museum of legio XVIII -Bonn Museum. Silver plated and partially gold-plated Roman torque.

Only the droplets and the hair on the head are partially gilded. My panther head torque model: 1 pair torque, 2 pieces (160g. each torque). All this hollow! Here I've achieved 160 g. on each torque! This is a very good light weight! From brass silvered.

These are just the silver-plated models.

A set completely made of brass all this are hollow! Here I've achieved 80 g. on each torque! This is a very good light weight! From brass. I shot them together with silver plated ones for better shades. Red bronze is also possible as an option!

My wax models on the Panther Head.

……

Ours torque in action:

……

My first torque model: 1 pair torque 2 pieces (80 g. each torque). All this hollow! Here I've achieved 80 g. on each torque! This is a very good light weight! From brass. Tinned or silvered.

The sets model with “droplets”. Resembling fresco of centurion of legio XVIII -Bonn Museum.

……

Armillae

Armillae models red bronze or silver-plated-different sizes in diameter. I gained a very good weight! 108g. each torque (hollow)!

My wax models on the lions head.
