

Sarissa an Macedonian ancient massive iron socketed spear.

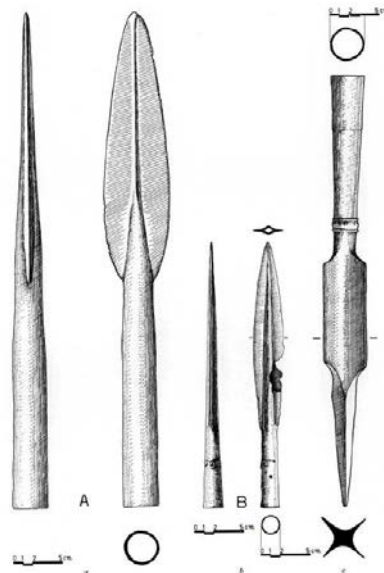

Fig. 9. — A. Pointe de lance A. (1 : 2) ; B. Pointe de lance B. (1 : 2) ; C. Talo de lance (1 : 3).

Main weapon in Macedonian phalanx of Philip II and Alexander the Great.
 Sarissa has blade of leaf-shape design with a pronounced central mid-rib, with a faceted cylindrical bracket that once joined two separate wood shaft lengths of the spear, and
 Macedonian 4th century sauroter from Vergina, Northern Greece
 Ours Sartorer is made from mild steel, and it's in length 45cm, weight is 814 gr.
 First step we had to do was to create an accurate and nice wax model of the Sartorer.
 Wax models are made to be thin and fine in order to avoid hard filing metal work. This can be achieved only practicing modern method of casting mild steel alloy

This is just the beginning, and we have still long way to go but we shell do whatever we can to produce good looking Sarissa spears in our association.
